

Noise Process

- Once a preferred set of improvements is determined, noise levels will be predicted at each residence located along the Corridor using the FHWA's Traffic Noise Model (TNM, v2.5)
- A list of "impacted" residences will be generated (residences where predicted noise levels equal or exceed 65 dBA)
- The cost/benefit of noise mitigation measures will be determined for each impacted area
- A list of recommended noise mitigation measures will be generated based on the results of this analysis
